

# Memory Based Quiz - CS7.302 Computer Graphics S'26

---

1. Derive the transformation matrix for reflection (*or maybe rotation*) of a point about line  $x+y=1$
2. It was a 6 mark question. And said something like: Are the transformations (rotation, scaling, translation) commutative? Justify.
3. If a line segment is projected, is the midpoint of projection the same as projection of original midpoint? Are parallel lines preserved in perspective projection? If not, are there any specific lines that remain parallel?
